TRINOMIAL SPLITTING

Use this for any quadratic trinomial that has an x² coefficient of 1 (if not, divide through by the x² coefficient)

EXAMPLE 1

Factorise $x^2 + 5x + 6$ using the trinomial splitting method

EXAMPLE 2

Factorise $x^2 + 10x + 24$ using the trinomial splitting method

Step 1: Find two numbers

that add to give the coefficient of x and multiply to give the constant term

Step 2: Rewrite the middle term

using the two numbers found in Step 1. Then factorise by grouping

Step 3: Factorise (if possible)

the two quadratic factors. The final answer is the product of the two linear factors

EXAMPLE 3

Factorise $x^2 + 7x + 12$

using the trinomial splitting method

Write the names of the objects in the boxes below.

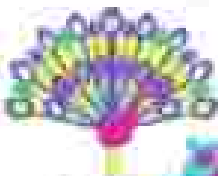

► **How much, how often**

How often should you be drawing? How much? It's a common question, and the answer is: it depends on you. Some people draw every day, while others only draw once in a while. There's no right or wrong answer.

► **Why draw?**

There are many reasons why people draw. Some draw to express their feelings, while others draw to learn about the world around them.

It's not always about the end result, and that's perfectly okay. Sometimes the process of drawing is what matters most.
